

How does Armenia generate electricity?

Most of the rest of Armenia's electricity is generated by the natural gas-fired thermal power plants in Yerevan (completed in 2010) and Hrazdan. Upon gaining independence, Armenia signed the European Energy Charter in December 1991, the charter is now known as the Energy Charter Treaty which promotes integration of global energy markets.

How much solar power will Armenia have in 2024?

The government expects solar PV capacity to reach 100 MW by 2024 and 1,000 MW by 2030. According to the Ministry of Territorial Administration and Infrastructure, which oversees the energy sector, wind energy potential in Armenia is approximately 450 MW of total installed capacity.

Why is Armenia a partner country of the EU INOGATE energy programme?

Armenia is also a partner country of the EU INOGATE energy programme, which has four key topics: enhancing energy security, convergence of member state energy markets on the basis of EU internal energy market principles, supporting sustainable energy development, and attracting investment for energy projects of common and regional interest.

Does Armenia use natural gas?

Natural gas represents a large portion of total energy consumption in Armenia, accounting for 50% and is the primary means of winter heating in the country.

Does Armenia have solar energy?

Armenia has significant solar energy potential: average annual solar energy flow per square metre of horizontal surface is 1 720 kWh (the European average is 1 000 kWh), and one-quarter of the country's territory is endowed with solar energy resources of 1 850 kWh/m<sup>2</sup> per year. Solar thermal energy is therefore developing rapidly in Armenia.

What are the main energy sources in Armenia?

Since 1996 three main energy sources for electricity generation in Armenia were natural gas, nuclear power and hydropower. Despite a lack of fossil fuel, Armenia has significant domestic electricity generation resources.
