

Slaughterhouse wastewater is characterized by high concentrations of organic matter. This creates a need to explore methods for its treatment before discharge. This study evaluated the efficiency of an ...

Charging Solar Cells in Artificial Light is a Waste of Energy. Except to prove the concept of conversion loss in energy generation, there's no real efficient or intelligent reason to try and power solar cells with artificial light, ...

Trina Solar marked the 28th World Wetlands Day on February 2nd, themed "Wetlands and Human Well-being." Recognizing wetlands as the "Kidneys of the Earth," vital ...

artificial wetland system comes from the construction and operation of the artificial wetland and aeration tank. Marine water ecotoxicity is the main ... the energy, power, and transportation ...

Zhang, N. et al. High-performance semitransparent polymer solar cells floating on water: rational analysis of power generation, water evaporation and algal growth. Nano Energy ...

In searching for a solution to water sources and soil pollution, we propose exploring Artificial Wetlands (AW) as Nature-Based Solutions (NBS). These solutions provide environmental, social, and ...

Solar power prediction is a critical aspect of optimizing renewable energy integration and ensuring efficient grid management. The chapter explore the application of artificial intelligence (AI) techniques for ...

A floating power generation device is designed and fabricated to overcome the power supply limitations of wireless sensor networks for environmental monitoring. Once there is a temperature difference between the ...

At an unprecedented rate, natural resources for freshwater generation and energy production are being depleted. Water scarcity and contamination from agriculture and industry are major ...

Depending on the flow state of water in wetland systems, they can be classified as artificial wetlands with surface flow, artificial wetlands with subsurface flow, or a combination of both. The stable operation of artificial ...

From Table 8, it can be determined that with the increase of the tilt angle of the solar panel, incident irradiance will increase, which leads to an increase in power generation, a decreased LCOE ...

Artificial wetland solar power generation equipment
