

Is SolarCity a European model for low-energy construction?

The open approach taken by the City of Linz with respect to numerous aspects of solar energy use and resource-saving construction enabled the new urban district solarCity to become an exemplary European model for low-energy construction using alternative energy sources in social housing.

What is a solar city?

The solarCity is an energy-saving living district in Linz -Pichling, Austria, which provides living space for about 4,000 people. The houses were built using a low-energy design.

How does the city of Linz support solar energy systems?

The City of Linz supported the construction of these solar energy systems with financial subsidies. The municipal subsidy system for solar energy systems in communal housing provides for a basic allowance of 720 euros plus 150 euros per square meter of collector area.

What is SolarCity & how does it work?

Through the comprehensive use of solar energy, compact construction, and measures to avoid overheated dwellings in the summer months, the energy demand was kept extremely low. The name solarCity stands for the comprehensive use of solar energy in the sense of the European Charter for Solar Energy in Architecture and Urban Planning of 1996.

How many people will live in solar city Linz?

A great deal of effort was devoted to ensuring a low level of fossil fuel consumption. Ultimately, 25,000 people will live in Solar City Linz, divided across five centres. The first phase of the project involves 32.5 hectares of building land and will offer housing to 4,500 people, together with the necessary facilities and 20 hectares of parkland.

What does SolarCity mean?

The name solarCity stands for the comprehensive use of solar energy in the sense of the European Charter for Solar Energy in Architecture and Urban Planning of 1996. The term "solar" is conceived as broadly as possible and begins with the planning of the buildings in accordance with the principles of solar architecture.
