

Battery factory Latvia

Is there an electric vehicle battery factory in Latvia?

Swedish tech company Anodox Energy Systems has announced plans to produce electric vehicle batteries in Latvia, with the first factory in the Port of Riga expected to be operational by December 2022. A second factory for rapidly growing LFP cell technology will be established soon after.

How will a new battery plant be built in Latvia?

According to Latvia's Ministry of Economy, a plant for the assembly of battery packs will be built first in the port of Riga. The second plant, which will focus on cell production, is to follow shortly afterwards. A total of 50 million euros will be invested and up to 300 new jobs created, according to the Ministry of Economy.

Why did anodox energy systems open a factory in Riga?

"We are very glad that Anodox Energy Systems decided to open factories in Riga. This will bring investment, jobs, and income to the city as well as assess the attractiveness of opportunities that our city offers by ensuring that Riga is competitive in attracting new high-growth companies.

Where will the battery production cycle be completed?

"This means that the battery production cycle will be completed in Latvia, from raw material to complete system. From Riga, the finished products will be delivered to customers in Scandinavia, Germany and the rest of Europe. A truly strong demonstration of our commitment to bring Latvia to the forefront of automotive technology."

The battery maker also said it would quadruple its planned investment in a new factory in Arizona to \$5.5 billion, a large portion of which will be dedicated to EV battery production.

Northvolt said that its factory will source raw material from recycled battery metals as part of its commitment to procuring 50% of its raw material needs from recycling by 2030. The company also plans to build a battery recycling plant at the site to reuse by-products from the production process.
