What type of roof was used in Bermuda in 1687?

Roofing was mostly of palmetto leaves. In 1687 Governor Robinson reported that of 579 houses in Bermuda 29 had stone roofs, 63 had wood shingles and the rest were thatched. The few buildings known to have been constructed in stone were forts and, according to John Smith's 1624 engraving, the State House in St. George's.

What does a Bermuda house look like?

The archetypical Bermuda house is a low, squared building with a stepped, white roof and pastel-painted walls, both of which are made out of stone. Between roof and wall are a series of eaves painted a third colour, which is also used on the wooden shutters of relatively small windows.

What were the British military buildings like in Bermuda?

Not all of the British military buildings were fortifications, of course. Barracks, hospitals and officer houses were built to British military standard, which fared poorly in Bermuda. Verandahs were often supported by iron columns that required constant painting, while roofs were lined with Welsh slate that was lost after every hurricane.

How were buildings built in Bermuda?

No buildings finished in this manner survive so it is impossible to be certain how they were built. Roofing was mostly of palmetto leaves. In 1687 Governor Robinson reported that of 579 houses in Bermuda 29 had stone roofs, 63 had wood shingles and the rest were thatched.

What was the first stone building in Bermuda?

The State House, Bermuda, built in 1620, was one of the first stone structures. The predominance of stone as a building material came about early in Bermuda's history. The first settlers built using the native and abundant Bermuda cedar, but such structures were rarely able to withstand either the normal winds or the occasional hurricane. [2]

How big was Bermuda's Government House?

At 30,000 square feet (2,800 m²), [64] the verandah-wrapped building was far larger and grander than either the Government House, residence of Bermuda's governor, or the Admiralty House used by the head of the North American Station. [65]

To build a traditional Bermudian roof, masons mortar rectangular slabs, or "slates," of local limestone to each other over a hip-roof frame. Then they apply more mortar over the top and edges of the slates, filling the joints and giving ...
