

Should Bhutan diversify its energy sources?

In the face of climate change and the need for enhanced energy security, the business case for Bhutan to diversify its energy sources, especially by tapping into alternative renewable energy, is compelling. Bhutan is yet to realize its full potential in terms of renewable energy.

How can energy pricing improve energy efficiency in Bhutan?

Reforms to energy pricing can help level the playing field for renewable energy technologies, thus incentivising their uptake in both on-grid and off-grid settings. In the specific case of Bhutan, improving energy efficiency is a fundamental and cost-effective first step towards integration of renewables in all sectors.

What is Bhutan's national energy efficiency and conservation policy?

Bhutan's "National energy efficiency and conservation policy" delineates a comprehensive set of energy efficiency and energy conservation measures for all sectors (DRE-MOEA, 2017). A concerted effort toward comprehensive implementation of these measures is an essential first step towards a sustainable energy system.

Is Bhutan a good country for solar & wind energy?

Despite the mountainous terrain, the country is blessed with good solar and wind resources in several regions. As per the Renewable Energy Management Master Plan (2016), Bhutan could produce 12 gigawatts (GW) of solar and 760 megawatts (MW) of wind energy in technical terms.

Could hydropower be the future of energy in Bhutan?

While hydropower is likely to remain an important component of the energy sector and economy of Bhutan, renewable energy technologies such as solar PV, wind, bioenergy and small hydropower could offer opportunities to diversify the country's energy mix and help address rising energy demand.

How much electricity does Bhutan generate?

Of-grid hydropower and solar home lighting systems accounted for a very small percentage of electricity generation in 2014 (Figure 1). Bhutan's installed power generation capacity in 2017 was 1.6 gigawatts (GW), representing only 6% of its techno-economic feasible hydropower potential.
