

# Bionic power inc Equatorial Guinea

Bionic Power designed the Agilik--its smart orthotic device--for people with crouch gait from cerebral palsy or another knee-extension-deficiency disorder. What makes it different from the other orthotics out there is that it not only helps its users to stand taller and walk stronger, giving people more autonomy, but has the potential to increase motor control as well.

Crouch gait--reducing it, correcting it--is one of our primary goals at Bionic Power. The Agilik, our smart orthotic device, has been designed to curtail and correct crouch gait, a common disorder among people with cerebral palsy (CP), spina bifida, and other knee-extension-deficiency disorders. Crouch gait is clinically described as ...

Bionic Power designed the Agilik to reduce crouch gait, a common symptom across all of the disorders we mention above. Crouch gait gets its name from how it appears--as if the person is crouching while walking. The person crouches because their knees and hips are bent (in flexion), while their ankles bend forward. ...

They will contact Bionic Power and the competent authority of the Member State in which the user and/or patient is established. Others: Please contact the competent authority of the Member State in which the user and/or patient is established and ...

Unfortunately, no. Bionic Power is not a charity and cannot provide tax receipts for donations. What happens to the money we donated if you do not reach your goal? Our stretch goal is to raise CA\$500,000 so we can donate 25 Agilik devices to children and adolescents who need them.

While the iLet bionic pancreas is the latest AID system to be unveiled, other products such as Insulet's Omnipod 5 and Medtronic's MiniMed 780G, which both function in a similar fashion, have been marketed in this ...
