

## Causes of failure of lithium batteries for ship energy storage

What causes a lithium-ion battery energy storage system to fire?

A lithium-ion battery energy storage system (LBESS) is usually composed of a low boiling point and a flammable organic electrolyte. High temperature, vibration, and other external environmental factors may trigger the thermal runaway of LBESS, leading to fire accidents [5].

What happens if a lithium ion battery fails?

Lithium-ion battery failure also has the potential to release explosive gases, especially when water is involved. The water can react with the lithium to produce highly flammable hydrogen gas, and because ship-based battery systems are often in enclosed spaces, the risk of explosion is significantly heightened.

What is a fire accident during transportation of lithium battery energy storage systems?

A fire accident is the main type of accidentduring transportation of LBESS. Maritime transportation is characterized by high vibration, high temperature, high humidity, and possible collision, which may cause fire accidents. Therefore, it is necessary to evaluate the fire risk during the transportation of lithium battery energy storage systems.

What causes a lithium ion battery to explode?

The root causes of these accidents include overheating, short circuit, overcharge, self-heating or mechanical crash. Table 3. Some LIB fire and explosion accidents in the past few years. Battery system self-ignited. One LIB caught fire and propagated to over 3500 LIBs. Maybe overcharged.

Are lithium-ion batteries a new safety issue for ships?

Lithium-ion batteries: a new safety issue for ships? More and more ships are turning hybrid or fully electric and increasingly rely on lithium batteries and energy storage as a power source. The technology has proven itself reliable and powerful, but safety concerns, such as thermal runaway, still linger.

## Are lithium-ion batteries safe?

Authors to whom correspondence should be addressed. Lithium-ion batteries (LiBs) are seen as a viable option to meet the rising demand for energy storage.
