

Cook Islands Gulf Energy Company

Who imports the fuel in Cook Islands?

85% of the country's fuel and all of its jet fuel is imported by Pacific Energy. The Energy Act 1998 established an Energy Division within the Ministry of Works, Energy and Physical Planning (now Infrastructure Cook Islands) responsible for energy policy and electricity inspections.

How much electricity does the Cook Islands use per capita?

Per-capita electricity consumption is approximately two-thirds that in the European Union. Greenhouse gas emissions total 88,810 t per year, or 10.36 t per capita. Electricity in the Cook Islands was historically produced by diesel generators on each island.

How much gas does the Cook Islands produce a year?

Greenhouse gas emissions total 88,810 t per year, or 10.36 t per capita. Electricity in the Cook Islands was historically produced by diesel generators on each island. Fuel was imported from Auckland and required long sea voyages to get to the northern atolls, resulting in high costs and occasional supply disruptions.
