Where is Echogen Power Systems (DE) located?

Recipient Organization: Echogen Power Systems (DE),Inc.365 Water Street Akron,Ohio 44308-1044

How does Echogen work in generating power?

Echogen converts wasted heat into higher value power using its expertise in sCO₂-based power cycle technology.

Why should you choose echogen?

The world's energy landscape is changing. The increased use of renewable sources, the drive for lower emissions and the volatility of fossil fuel prices have put an unprecedented premium on efficiency and advanced technologies. A compact, water-free solution with remote operation capabilities and best-in-class efficiency is what Echogen offers.

Echogen has developed next generation technology for a wide range of power generation applications. The sCO₂ cycle offers improved performance and significant operational advantages over steam and ORC cycles for both ...

Echogen Power Systems, Inc. is commercializing waste heat to power with a proprietary system. The company's breakthrough power generation cycle called the Thermawave® Waste Heat Recovery Engine uses a modified Rankine ...

The system will utilize a chemical process to store solar energy collected during the day. The Echogen power cycle, which uses supercritical carbon dioxide (sCO₂) as the working fluid, will then convert the stored energy into electricity that can be generated at all hours - even at night.

Echogen Power Systems is a team of experienced engineers working with elite service and equipment manufacturers to provide a world-class energy solution for our customers. Our People Learn about our management team members.

passes through a combination of recuperators and waste heat exchangers (without using a secondary oil loop) before entering the turbo-expander, which drives the shaft ...

The facility's innovative technology is based on an advanced Rankine Cycle that Ohio-based technology company Echogen Power Systems (EPS) has developed since its founding in 2007 under numerous ...

A Comparative Study of Heat Rejection Systems for sCO₂ Power Cycles Presented at 5th International Symposium - Supercritical CO₂ Power Cycles, 28-31 March, 2016, San Antonio, Texas, U.S.A; Supercritical CO₂ Cycles for Gas Turbine Combined Cycle Power Plants Presented at Power-Gen International 2015, 8-10 December 2015, Las Vegas, Nevada, ...

Once commercial, applications for long duration storage on renewable-driven conventional grids include: Pairing with wind and solar - for high capacity factor power plants; Stand-alone storage - to defer investment in new transmission (larger scale) and new distribution (smaller scale) due to changes in power supply and demand locations; Islanded power grids - to lower power costs ...

Echogen for Oil & Gas applications. The Echogen sCO₂ cycle is ideally suited for heat recovery of gas turbine exhaust and is capable of both electrical and mechanical (i.e. shaft) power output. This allows for potential applications in all three stages of Oil & Gas operations: Upstream - offshore exploration and recovery rigs, FPSO's

Every member of the Echogen team plays an instrumental role in defining who we are and in shaping what we will become. Being a part of Echogen's team and pursuing its mission enables you to impact the future of energy and power ...

Echogen for Power Generation applications. Echogen has developed next generation technology for a wide range of power generation applications. The sCO₂ cycle offers improved performance and significant operational advantages over steam and ORC cycles for both combined-cycle systems and primary power plants.. Gas turbine combined-cycle

Siemens Energy has licensed Echogen Power System's patented technology. Echogen's technology uses sCO₂ as the working fluid in a closed-loop power cycle to collect waste heat from the source and convert it to electrical power. By deploying sCO₂-based waste heat recovery solutions, industrial operators in the oil & gas, power generation ...

At Echogen, we have designed an internship program that provides a practical, real-world experience geared to accelerate your knowledge beyond the classroom and prepare you for professional success. You will work alongside our employees and regularly interact with our management team.
