Electricity back up plan Iceland

Does Iceland need a long-term energy policy?

Iceland needs long-term energy policies for maintaining and enhancing energy security, specifically for electricity supply. Some options include expanding clean energy capacity. (The passage also mentions other options for energy security and economic growth, but the focus is on electricity supply in response to the question.)

How does electricity work in Iceland?

Much of electricity in Iceland is generated by hydroelectric power stations. Írafossstöð was built in 1953 and is one of Iceland's oldest hydroelectric plants still operating,located just south of Þingvallavatn. The electricity sector in Iceland is 99.98% reliant on renewable energy: hydro power,geothermal energy and wind energy.

What type of energy does Iceland use?

The electricity sector in Iceland is 99.98% reliant on renewable energy: hydro power, geothermal energy and wind energy. Iceland's consumption of electricity per capita was seven times higher than EU 15 average in 2008. The majority of the electricity is sold to industrial users, mainly aluminium smelters and producers of ferroalloy.
