

# Energy battery Isle of Man

How will the Isle of Man generate electricity?

Plans to generate about 75% of the Isle of Man's electricity through solar and on-shore wind projects have been backed by the Council of Ministers. Manx Utilities (MU) will look to install solar panels on public car parks and government buildings. Wind turbines could also be built on public land to create 30MW of electricity by 2026.

How much electricity does the Isle of Man need?

While average electricity demand on the Isle of Man stands at 40MW, it can peak at 75MW during the winter and drop at night during summer to 25MW. MU chairman Tim Johnston said "detailed work" to determine the best approach to increase renewable energy was underway.

Will the Isle of Man be short of baseload power?

Both UK and RoI are predicted to become short of baseload power over the next decade. Opportunities for the Isle of Man to provide stabilising power to GB or ROI from a large-scale baseload power station, e.g. biomass or a small modular reactor? Neither option is without challenge, but likely provide the greatest potential for export.

Why should you go green on the Isle of Man?

go green promote clean energy technologies on The Isle of Man. Reduce your environmental impact, one carbon-footprint at a time. Air Source Heat Pumps (ASHP). At a price which does not cost the earth, go green today.

How much electricity should Mu generate?

However, "big questions" needed to be asked about how much electricity MU should generate "versus how much should come from the private sector", he added. While average electricity demand on the Isle of Man stands at 40MW, it can peak at 75MW during the winter and drop at night during summer to 25MW.
