

How much money does Estonia spend on energy?

By energy type, Estonia committed at least USD 28.54 million to oil and gas (at least USD 28.54 million to unconditional oil and gas). In addition, no public money commitments identified for coal. Further, no public money commitments identified for hydrogen based on fossil fuels.

Does Estonia use natural gas?

Natural gas plays a relatively minor role in Estonia's energy system and is used mostly for heating. In 2021, natural gas accounted for just 8.6% of total energy supply (versus the IEA average of 30%) and came mostly from Russia.

What percentage of Estonia's energy supply comes from Russia?

In 2021, natural gas accounted for just 8.6% of total energy supply (versus the IEA average of 30%) and came mostly from Russia. In 2022, Estonia took swift actions to end its reliance on Russian gas and secure regional gas supply and reduced gas demand to 5.8% of total energy supply.

What type of energy is used in Estonia?

Renewable energy here is the sum of hydropower, wind, solar, geothermal, modern biomass and wave and tidal energy. Traditional biomass - the burning of charcoal, crop waste, and other organic matter - is not included. This can be an important energy source in lower-income settings. Estonia: How much of the country's energy comes from nuclear power?

What are Estonia's ambitious energy goals?

Estonia's ambitious targets require accelerated renewables deployment, increased electrification and phasing out oil shale generation while ensuring a just transition that maintains energy affordability and supports economic development in the oil shale region.

Is electricity produced in Estonia based on oil shale?

Electricity production in Estonia is largely dependent on fossil fuels. In 2007, more than 90% of power was generated from oil shale. The Estonian energy company Eesti Energia owns the largest oil shale -fuelled power plants in the world, Narva Power Plants.

Renewable energy storage solutions help reduce reliance on fossil fuels and lower greenhouse gas emissions, contributing to a healthier environment. Integrating these solutions into our energy systems paves the way for a sustainable and resilient energy future that supports economic growth and protects natural resources.

Estonia: Many of us want an overview of how much energy our country consumes, where it comes from, and if we're making progress on decarbonizing our energy mix. This page provides the data for your chosen country across ...
