This design makes it easy to increase the battery's energy storage capacity simply by increasing the amount of electrolytes stored in external tanks. That has many engineers eyeing these batteries as a way to store the overabundance of solar and wind power at periods of peak production for use at times when their production is off.

Falling costs, rising value of energy storage. The final text of the Energy Storage and Grids Pledge for COP29 recognises the essential role both play in the power sector's decarbonisation, including facilitating the increased integration of renewable energy and providing stable and secure supply of electricity.

"The energy transition is one of the greatest challenges but also opportunities of our time," said ABB Energy Industries president Per Erik Holsten. "We are proud to build a partnership with Blykalla and use our automation and electrification knowledge to support the role of SMRs in producing clean electricity and driving decarbonisation."
