

What is the energy access problem in Mali?

Mali faces a critical energy access challenge. The national power access rate was 50% in 2019 (compared to 36.11% in 2015). The problem is particularly acute in rural areas with 21.12% access rate in 2019 (compared to 15.75% in 2015).

Why is Mali a partner of power Africa?

Mali is a partner of Power Africa, a market-driven, U.S. government-led public-private partnership (PPP) aiming to double access to electricity in sub-Saharan Africa. It offers tools and resources to private sector entities to facilitate doing business in sub-Saharan Africa's power sector.

Did Mali import energy?

Mali did not import energy. Energy sources, particularly fossil fuels, are often transformed into more useful or practical forms before being used. For example, crude oil is refined into many different kinds of fuels and products, while coal, oil and natural gas can be burned to generate electricity and heat.

What are the different types of energy transformation in Mali?

One of the most important types of transformation for the energy system is the refining of crude oil into oil products, such as the fuels that power automobiles, ships and planes. No data for Mali for 2022. Another important form of transformation is the generation of electricity.

What is the financial situation of *Energie du Mali*?

Energie du Mali (EDM) (100% state-owned) is the national power utility. The financial situation of EDM has been undermined by high generation costs as well as high technical and commercial losses, overdrawing the national budget in the range of US\$100-150m/year in recent years. The country does not have domestic crude oil production or a refinery.

Is *Energie du Mali* subsidized?

Energie du Mali (EDM), the state-owned electric utility, is poorly managed and heavily subsidized by the government and regional multinational banks, as the relatively high price of its electricity (average \$0.17/kWh) is insufficient to cover the cost of production and distribution (\$0.24/kWh).

This paper aims to supplement existing research on China's fossil energy imports by identifying the factors that interrupt this trade. Energy trade has its own unique features that are influenced by factors such as geographical location, political environment of the importing and exporting countries and climate risk (Cole and Elliott, 2003 ...
