

This paper presents a life cycle assessment for three stationary energy storage systems (ESS): lithium iron phosphate (LFP) battery, vanadium redox flow battery (VRFB), and liquid air energy storage (LAES).

Projection on the global battery demand as illustrated by Fig. 1 shows that with the rapid proliferation of EVs [12], [13], [14], the world will soon face a threat from the potential ...

Electricity from the combination of photovoltaic panels and wind turbines exhibits potential benefits towards the sustainable cities transition. Nevertheless, the highly fluctuating ...

An established stream of literature that addresses sustainability at a local level (Hartmuth et al., 2008; Shi et al., 2021). This is because sustainability is not only a global issue and communities are often considered ...

Environmental assessment of Lokai energy storage box
