Eritrea ecohive energy

Eritrea: Energy intensity: how much energy does it use per unit of GDP? Click to open interactive version. Energy is a large contributor to CO 2 - the burning of fossil fuels accounts for around three-quarters of global greenhouse gas emissions. So, reducing energy consumption can inevitably help to reduce emissions.

Eritrea is developing building its sustainable energy capacity from such sources as wind and solar. Development of renewable energy sources helps give the country access to reliable energy and lower greenhouse gas emissions. The government of Eritrea built a wind energy pilot project in the city of Assab in the Southern Red Sea region in 2010 with the help of the United Nations Development Programme. The wind ...

This plant will convert wastes that cannot be recycled into precious resources adding an impressive 4.5% as green energy to Malta"s total energy demand. The waste management credentials of the plant are strong by themselves, however they also need to be seen as part of a holistic strategy that is being implemented at the ECOHIVE Complex.
