Can the Faroe Islands convert their energy system to renewable sources?

A number of researchers have studied the conversion of the Faroe Islands' energy system to renewable sources. These studies looked at a single island or more broadly [51, 53] and their primary focus was on the techno-economic optimization of the new system.

How is electricity produced in the Faroe Islands?

Electricity on the Islands is currently produced through a combination of fossil (about 100 MW) and renewable sources (about 62 MW). Fig. 1. Placing the Faroe Islands, inset in red [50]. Space heating on the islands is primarily from oil burners and in 2016 made up 24% of the imported oil usage [51].

What are the key innovations in energy planning for the Faroe Islands?

The key innovations of this paper for islands, and global energy transition planning, are: The central incorporation of social perspectives into the energy planning for the Faroe Islands via explicit elicitation of criteria weights of local stakeholders.

The size of a solar panel should be chosen based on factors such as available space, energy needs, and budget. Solar panels can be combined to create larger systems, and the size of the system will depend on the energy needs of the user. Choosing the right size of the solar panel is important for maximizing energy production and cost savings.
