

The Sustainable Energy for All (SE4All): Rapid Assessment and Gap Analysis report lays out Fiji's targets and requirements for achieving sustainable energy for all Fijians. It presents a comprehensive analysis of the overall energy situation in Fiji and subsequently identified the key gaps and support needed

Smart Grids and Sustainable Energy. Publishing model: Hybrid. Submit your manuscript. Back to overview; Editorial board; Aims and scope; Journal updates; Search all Smart Grids and Sustainable Energy articles Volume 7, Issue 1 December 2022. 33 articles in this issue

Second generation smart grid; Customer interaction with Energy and Information: Utilization of data from smart meters enabling actor-based electricity management, storing, and generation. ... In the context of developing a renewable-based sustainable energy network, it can be observably postulated that a bi-directional communication and ...

with no or very limited grid connectivity. On the other hand, waste residues and resources, ... (NEP) that has the vision of "A sustainable energy sector for Fiji" and a mission "To provide an enabling environment for a sustainable energy sector". The FREPP also complements Fiji's climate change mitigation strategy developed

This comprehensive study presents the state of affairs of Fiji's energy situation and the SWOT analysis will help develop pathways for Fiji's sustainable development. Fiji is ...

The smart grid has been running successfully since 2018, and the technology developed here is being scaled up for other smart grid projects. This pioneering initiative empowers communities to control their energy supply, reduce environmental impact, and contribute to a sustainable energy future.

Another topic to attend is a faster policy that regulates the industry of smart grids and make it sustainable in long term. Thus, these energy consumers will be interested in machine-to-machine communication, i.e., making micro networks ...

Manuscript Submission Manuscript Submission. Submission of a manuscript implies: that the work described has not been published before; that it is not under consideration for publication anywhere else; that its publication has been approved by all co-authors, if any, as well as by the responsible authorities - tacitly or explicitly - at the institute where the work has been carried out.

Developing and implementing sustainable energy is a method to solve energy challenges and eliminate the environmental issues associated with them. It will become the leading source of energy within decades, replacing conventional fossil energy, as many forms of sustainable energy generation coincide nicely with the concept of smart grids. Thus, research ...

Partners: Aeon Energy. Country: Fiji. Technology: Smart green grids including mini and main grid technologies. Stage: Mid. Stage: Round 10. For island nations, limited land availability poses a significant challenge for onshore renewable solutions. Aeon Energy addresses this with its ocean-based technology.

Smart Grids and Sustainable Energy. Publishing model: Hybrid. Submit your manuscript. Back to overview; Editorial board; Aims and scope; Journal updates; Search all Smart Grids and Sustainable Energy articles Volume 5, Issue 1 December 2020. 25 articles in this issue

At this juncture of the world's energy system, sustainability and resilience are gaining prominence as key considerations in the pursuit of a more reliable and environmentally friendly energy future [1]. Two critical components lie at the core of this paradigm shift: the incorporation of smart grid technology and the application of hydrogen energy [2].

This paper presents FARHAN, a novel hybrid model designed to address the challenges of electrical load forecasting in smart grids. FARHAN combines descending neuron attention, long/short-term memory (LSTM), and Markov-simulated neural networks to optimize accuracy and analysis time for short-, mid-, and long-term smart grid planning decisions. ...

The global energy sector stands at a crucial juncture, grappling with the dual challenges of escalating electricity demand and the imperative for sustainable development [1]. Traditional power grids, designed around centralized generation and extensive transmission networks, are increasingly unable to cope with the dynamic and decentralized nature of ...

The field of smart grids and sustainable transportation is at the forefront of the global energy transition, driven by the urgent need to mitigate climate change and reduce greenhouse gas emissions. Traditional energy models, heavily reliant on fossil fuels, have resulted in the transportation and industrial sectors contributing to approximately 60% of carbon emissions. ...
