

# Fixed generator air intake and exhaust

#### What is the intake system of a diesel generator set?

The intake system of the diesel generator set is equipped with dry air filter and air resistance indicator, with exhaust gas turbocharger, full intake and guaranteed performance.

### Does a generator intake need cool air?

It is important to note that cooling air is needed for more than just the engine; the generator intake also requires cool clean air. The most effective way to do this is to provide a ventilation air source low to the ground at the rear of the package.

## How to choose a diesel generator intake pipe?

Diesel intake pipes for diesel generator set should be avoided as far as possible and the number of bends should be reduced, or use a large arc transition. The inner diameter of the intake pipe should not be less than 200mm, and the inner wall of the pipe should be smooth without soldering slag particles.

#### Do generators need ventilation?

Here are some facts and considerations you should know: Generators require ample amounts of airto cool and support the engine combustion process by expelling heat generated during operation. While proper ventilation factors in considerations of air movement; it directly impacts the effectiveness of heat removal from within the room.

How does generator exhaust enter a building?

Generator exhaust can enter a structure through large openings, such as windows and doors. However, exhaust and CO can also seep into the structure through smaller, less obvious openings. Verify the structure itself as correctly caulked and sealed to prevent air from leaking in or out.

## Where should diesel engine intake be arranged?

In order to provide enough fresh air for diesel generator set operation, diesel engine intake should be arranged in the air circulation place outside the engine room. Diesel intake pipes for diesel generator set should be avoided as far as possible and the number of bends should be reduced, or use a large arc transition.
