Why does a generator need a frame?

A generator needs a frame to hold all the other different parts at the right heights. This will allow the manufacturers to make a cheaper machine by putting parts closer to each other but will also help oil and fuel flow to the right places. 2. Engine

How does a generator work?

The generator part of a generator is called the alternator. By using mechanical force to move a magnet next to a metal wire you can create electricity. After that, you need other generator parts and internal wiring to make the electricity usable and get it to the right places. Mats is the founder and head editor of Generator Decision.
