In ESS 3000, ESS 3200, ESS 5000, and IBM Storage Scale System 6000, ESS version 6.1.1.x can generate call home events when a drive in an attached enclosure needs to be replaced. In ESS 3000, ESS 3200, ESS 3500, ESS 5000, and IBM Storage Scale System 6000, can also generate call home events for other hardware-related events in the I/O server ...

Disk call home for ESS 3000, ESS 3200, ESS 3500, ESS 5000, IBM Storage Scale System 6000, and ESS Legacy. The IBM Storage Scale RAID pdisk is an abstraction of a physical disk. A pdisk corresponds to exactly one physical disk, and belongs to exactly one de-clustered array within exactly one recovery group.

In coexistence environments, the call home for IBM Storage Scale System 6000 will be from the Utility Node EMS only at this time. Utility Node EMS exclusively manages call home events for IBM Storage Scale System 6000 in coexistence environments until further notice. Unified call home enablement might not be consistent on the Utility Protocol node.
