How much do solar panels cost?

If you just need a few panels for a small do-it-yourself solar project, expect to pay around \$200 to \$350 per panel (between \$0.80 and \$1.40 per watt). We suggest using NREL's PVWatts Calculator for estimating your solar installation costs. First, consider your average household energy needs. This tells you how big of a system you need.

Is financing solar panels worth it?

Financing solar panels is worth it if the loan payments are cheaper than your current utility bill. Leasing a system is cheaper upfront, but you won't get the federal tax credit. The average 5-kilowatt (kW) solar panel system is \$14,210 before considering any financial incentives.

How much does a solar panel cost in California?

California's average cost per watt is currently \$2.47. The difference comes down to efficiency and materials: Monocrystalline panels are made from pure, single silicon crystals; various silicon fragments melted together are used to make polycrystalline panels. Monocrystalline panels have a solid black appearance.

Should you buy a solar panel?

Think of using the calculator like checking the Kelly Blue Book value of a car you want to buy. Just having a baseline solar panel cost can help you avoid scams, reduce sticker shock, and give you a head start on saving up cash or improving your credit to secure financing.

How long do solar panels last on a roof?

Solar panels are designed to last 25 to 30 years, and your roof needs to last just as long. We recommend taking care of any roof repairs before installing solar panels. It's more cost-effective than removing the panels and reinstalling them later. Get a thorough inspection of your roof now and take pictures.

Are solar panels a good investment?

Homeowners with solar panels avoid \$62,219 in total utility costs over 25 years, on average. The federal solar investment tax credit (ITC) is the most significant financial incentive for most homeowners going solar. You might be able to combine the ITC with local tax breaks or rebates.
