The Philippines has a population of 115 million people across over 7,500 islands; geographical location can make total electrification difficult - especially on a single central grid. Therefore, microgrids that serve local communities have been gaining traction. These systems easily incorporate solar power to ensure access to clean energy.

The deal calls for a huge solar farm backed up by one of the world's largest batteries. It would provide 7% of the city's electricity beginning in 2023 at a cost of 1.997 cents per kilowatt hour (kWh) for the solar power and 1.3 cents per kWh for the battery. That's cheaper than any power generated with fossil fuel.

The main native fauna of the Heard and McDonald Islands include several insects along with large populations of seals, penguins, petrels, albatrosses, and other seabirds.

Most automakers use NMC because of the battery's energy density and battery cell's higher voltage. LFP chemistry is ideal for residential solar power storage. While lithium-ion batteries can cause a fire or explosion due to overheating during charging, lithium iron phosphate is very tolerant to overcharge and discharge
