

# How to remove the wire mesh on the photovoltaic panel

Can I add mesh to my solar panels?

Your solar provider will be able to include mesh when installing your solar panels, but you can buy and add it yourself if you prefer. Mesh is more expensive than spikes, costing around £100 for a kit including mesh and fixing clips.

How do I pigeon proof my solar panels?

Our proven pigeon proofing process involves placing 25mm galvanised steel mesh around the sides of your solar panels to stop pesky birds for good. We recommend you choose our non-intrusive solar panel mesh clips to fix the solar panel mesh in place. However, we are open to using alternative methods when asked.

How do I stop pigeons from nesting under my solar panels?

The best methods include the following: One of the most effective and humane methods to deter pigeons from nesting under your solar panels is the installation of bird mesh. Bird mesh, or solar panel mesh, is a durable and non-intrusive barrier that prevents pigeons and other birds from accessing the area beneath your solar panels.

Why do solar panels need mesh netting?

Mesh wire netting blocks access to the area under your panels, so it's good for keeping out leaves and other debris as well as birds. The mesh is hard to see from ground level and easy to clip directly onto your panels without affecting the warranty or damaging your roof. It's also easy to remove when your solar panels need servicing or cleaning.

How does solar mesh work?

The mesh is fitted securely using a variety of clamps, ties, and wires, until the space beneath your solar panels is virtually impenetrable. Some homeowners even combine mesh with spikes, which might be necessary if you live near a particularly ambitious bunch of birds.

How do pest control companies fit solar panels?

Many pest control companies in the UK will fit the edges of your solar panels with a galvanised steel mesh, designed to halt even the hardiest of feathered homewreckers. The mesh is fitted securely using a variety of clamps, ties, and wires, until the space beneath your solar panels is virtually impenetrable.
