

# How to write a good energy storage box lifting plan

How should lifting operations be planned?

All lifting operations should be planned so they are carried out safely with foreseeable risks taken into account. The person appointed to plan the lifting operation should have adequate practical and theoretical knowledge and experience of the lifts being undertaken.

What should be included in a lifting safety plan?

The plan will need to address the risks identified by a risk assessment, the resources required, procedures and the responsibilities so that any lifting operation is carried out safely. The plan should ensure that the lifting equipment remains safe for the range of lifting operations for which the equipment might be used.

What are the guidelines for safe lifting operations in the workplace?

This guidelines should be read in conjunction with the Code of Practice (CP) on Safe Lifting Operations in the Workplaces. The CP is the main guiding document on safe lifting operations and safe use of lifting equipment.

What is a safe lifting operation?

Properly planned by a competent person; Appropriately supervised; and Carried out in a safe manner. In this regulation "lifting operation," means an operation concerned with the lifting or lowering of a load. Lifting operations within this safe practice guide include the use of cranes and lorry loaders (e.g. Hiabs).

Why should a lifting plan be created?

A lifting plan should be created that details the particular steps needed to complete the lifting operation. By following these guidelines, lifting operations can be safely and efficiently completed, reducing the risk of accidents and injuries.

What is a lifting plan?

(See Appendix 2 LOLER ACOP extracts). A lifting plan needs to address the risks identified by the risk assessment and identify the resources required, the procedures and the responsibilities so that any lifting operation is carried out safely.
