Will Indonesia produce its own lithium battery for electric vehicles?

TEMPO.CO, Jakarta - Indonesia's Coordinating Minister for Maritime Affairs and Investment Luhut Binsar Pandjaitan expected that the country could produce its own lithium battery for electric vehicles by the second quarter of 2024. "It's not easy, but it doesn't mean it's unattainable.

Why is Indonesia a leader in the lithium battery industry?

In 2024, Indonesia stands at the forefront of the rapidly evolving lithium battery industry, catalyzed by its significant reserves of raw materials essential for battery production and a growing focus on renewable energy sources. As Southeast Asia's largest economy, Indonesia has strategically positioned itself as a

How much does a 5kwh battery cost?

The average price ranges from 300 USD/kWh to 400 USD/kWh for domestic use. We prepared a table with a few examples of 5kWh batteries and their average prices: Considering only the prices shown in the previous table, the average price of a 5kWh battery is \$2241. That's \$448/kWh, which is higher than the average price of LiFePO4 batteries.

Will Indonesia produce lithium batteries in 2024?

If all goes well in 2024, Indonesia will use the latest technology called 811 to produce lithium batteries. 2020 China Ni-Cr stainless Steel Industry Market and Application Development Forum

Can Indonesia turn Nickel into lithium batteries?

Indonesia has rich reserves of raw materials in the form of minerals, nickel and cobalt, and minerals, nickel and cobalt are key to the lithium battery industry in the next few years. "We all have production tools that can manage natural resources to add value in the future, such as turning nickel into batteries," Luhut said.

Why is Indonesia launching its first EV battery plant?

The launch of the country's first battery plant on Wednesday is part of Indonesia's push to move up the global EV supply chain. Indonesia has the world's largest reserves of nickel, a crucial component in EV batteries and steelmaking.

Conversely, the greatest GHG emissions could be achieved by mining and refining nickel in Indonesia, mining and refining lithium in China, and assembling the battery in China, resulting in a total GHG emission of 85 kgCO<sub>2</sub> eq/kWh, an increase of more than 10% compared to the current global-average production. This suggests that there is ...

Generally, the typical weight for a 5kWh lithium-ion battery - the most common type for home energy storage - ranges between 40 to 60 kilograms (88 to 132 pounds). These batteries measure approximately 400mm in width, 600mm in height, and have a depth that can vary from 100mm to 200mm, although dimensions can differ based on the ...

Grid-scale battery costs can be measured in \$/kW or \$/kWh terms. Thinking in kW terms is more helpful for modelling grid resiliency. A good rule of thumb is that grid-scale lithium ion batteries will have 4-hours of storage duration, as this minimizes per kW costs and maximizes the revenue potential from power price arbitrage.
