

Investment logic of photovoltaic bracket enterprises

Should we postpone or abandon photovoltaic projects?

In an uncertain environment, it is important to investigate whether to postpone, abandon or immediately invest in photovoltaic (PV) projects. This paper applies a real options model to explore the optimal investment decision for investors and the government's optimal incentive strategy in China's distributed PV market.

Why are PV projects regarded as call options?

This phenomenon can be explained as when the investment costs drop rapidly, PV projects are regarded as call options. As investment costs decrease, the value of investment opportunities in PV projects is higher. Therefore, investors tend to delay investment, and the threshold (h_t^*) for prompting investors to invest immediately is higher.

Are investors more willing to invest in PV projects without policy support?

It can be seen that investors in regions with abundant solar radiation resources are more willing to invest in PV projects without policy support. The development of PV technology can reduce investors' dependence on government policies.

How does the government adjust the investment time of PV investors?

As the leader of the game process, the government adopts policy tools to adjust the investment time of PV investors. PV investors, as followers, apply the real option method to evaluate the optimal investment time under different policy support. Backward induction is used to solve the two-stage game process.

Why is the PV industry a strategic emerging industry?

As a strategic emerging industry, the PV industry needs substantial capital investment in the development process due to its high technical requirements. If government subsidies adjust in conjunction with the expansion of the industrial scale, PV enterprises will be encouraged to actively innovate and lower production costs (Zhang and Wang 2017).

How do fit and investment costs affect the value of PV projects?

Obviously, the value of PV projects decreases with the drop in the FIT, while increases with the decrease of investment costs. This means that it is difficult to judge the fluctuating trend in the value of PV projects based on the simultaneous changes in FIT and investment costs.

Why choose us? The most reliable and efficient solar tracking power generation solution in history The omnidirectional photovoltaic tracking bracket system is a complete set of patented solar ...

Market Overview. The Photovoltaic Tracking Bracket market is experiencing robust growth globally, driven by the increasing adoption of solar energy as a sustainable alternative to ...

Investment logic of photovoltaic bracket enterprises

In the quest for renewable energy solutions on a global scale today, PV brackets, as the core components of solar power generation systems, play an +86-21-59972267. mon - fri: 10am - ...

The heritage behind the PV Logic brand is our vast experience in the design and manufacture of the most efficient and robust solar panels. A focus on testing, quality control and traceability ...

Its main business includes various photovoltaic fixed ground mounting structure, distributed mounting structure, tracking photovoltaic mounting structure, building mounting structure, and distributed power station development, etc. It is one of ...

This method uses the real options theory to construct an investment decision model for photovoltaic (PV) micro-grid enterprises. The study aims to analyze the impact of carbon trading revenue on a numerical ...

PV bracket can be mainly divided into fixed bracket and tracking bracket, fixed bracket mainly includes the best tilt angle fixed type and fixed adjustable type. ... Although the use of tracking ...

Then it expounds the evolution of PV module technology, inverter technology and System design technology, and analyzes the development status of photovoltaic industry chain and production of ...

As discussed, for wind and solar energy, only two industries are related with wind and PV energy enterprises, namely p 1tl ? p 2tl. However, three industries are engaged in the ...

With a diversified workforce of over 1,300 employees, the company aims to provide innovative and efficient solutions for maximizing solar energy generation. Arctech Solar's industry recognition and listing on China's ...

Variables Definition Inno Ratio of PV enterprises" R& D investment to the fixed capital (%) RDSub Logarithm value of GSs that PV enterprises received for R& D incentive purpose from ...

Studying the influence of carbon trading prices on micro-grid investment has specific guidance and practical significance for future government subsidy policies and the ...

Sustainability 2019, 11, 4322 3 of 27 Figure 2. Volume changes of newly installed capacity of photovoltaic (PV) in China from 2013 to 2018. With the booming growth of the DSPV market, ...

2? The application of CHIKO Solar Energy in the field of photovoltaic brackets. CHIKO Solar is a world leading manufacturer of solar brackets, headquartered in Shanghai and established in 2010. It has a production scale of 1000MW ...
