Can chrysanthemums be planted outside?

Chrysanthemums can be planted outside after the last frost, which usually means late spring to early summertime. If you're buying the plants during the summer, you can take them home and plant them straight away. But, if you've raised the plant from cuttings, you'll need to make sure you harden the plant off for a few weeks first.

What kind of soil do chrysanthemums need?

Soil type: Moist but well drained fertile soil is best for chrysanthemums. Aspect & position: Choose a sunny and sheltered spot outside or grow in the greenhouse or polytunnel. Our chrysanthemums are sent out in sets of rooted cuttings in spring or potted on plants a bit later.

Can chrysanthemums grow in pots?

Unless you're growing a dwarf variety, chrysanthemums grow tall enough to require support -- up to five feet in many cases. Stake the plants with canes to keep the stems from breaking. They're popular in garden borders, but can chrysanthemums be grown in pots, too?

Can chrysanthemums brighten up an outdoor space?

Knowing how to grow chrysanthemums can certainly brighten up an outdoor space, especially if you're looking for easy garden ideas or flower pot ideas. 'Chrysanthemums are perennial plants that can come back every year if they are properly cared for,' says Tim Marshall, Raby Castle's head gardener.

Can chrysanthemums grow in a greenhouse?

Chrysanthemums tend to come to their peak just as the weather starts to get wet and windy, so if you have been growing them in pots outside it is best to bring them into a cold greenhouse or polytunnel to see them through the winter.

How much sunlight do chrysanthemums need?

To begin with, you'll need to decide where to plant your chrysanthemums. 'Chrysanthemums prefer sunny locations and typically require at least six hours of sunlight each day,' says Petar, gardening and plant expert at Fantastic Gardeners. 'However, the more light they receive, the better they will grow and bloom and the more resilient they will be.'
