

Is there any Feng Shui theory about water dripping from photovoltaic panels

What is feng shui water theory?

In feng shui water theory, water is like a vehicle that energy travels with. This means that energy flows wherever water flows and comes to a standstill when water stagnates. And when water flow is too rapid, energy becomes unfavorable (sha chi) and can also disperse. Water that flows in a straight line, it can also store negative energy.

Can feng shui stop the drain?

These are two completely different types of water. Yet, in feng shui circles, there's a lot of concern around "containing" water and stopping the drain. This means that people will frequently go to silly and impractical measures to "stop the drain" of water in their bathrooms or kitchen sinks.

Can feng shui use artificial water?

With the absence of natural water, modern feng shui practices often advocate the use of artificially created water sources like fountains, swimming pools, drains, ponds, etc.

Does water flow affect feng shui?

A common word used to describe this is meandering. Even though a home owner might be contented that the water flow around the house does not have a negative impact on the feng shui at home, harnessing the flow of water around a property can bring about abundant wealth, luck and happiness.

Why is my drain leaking feng shui?

The problem with drains comes when energy goes down the drain unnecessarily (like water dripping into the drain) or some sort of open drain near your front door or in a key area where you'd want energy to stay and circulate. Because of the different ways water is used in the home, there are many different feng shui meanings of leaking water.

Is feng shui affecting bathroom energy?

Many well-meaning feng shui consultants will say that bathroom energy is problematic and that the "draining" energy of a home's plumbing can cause problems with health and wealth. The real problem is that they're applying this art from the negative. They're worried more about the drain and less about the generation of water.
