

How are emissions affecting the Isle of Man?

Consequently, emissions in this sector are increasing as other sectors decarbonise and electrify. Electricity generation (including emissions from both the Manx Utilities and the Energy from Waste plant) is currently the dominant source of carbon emissions on the Isle of Man, accounting for 33% of the island's emissions at 245KT per year.

How will the electricity sector change in the Isle of Man?

As the uptake for electric heating and electric vehicles increases, the electricity sector will have to grow to meet future demand. The majority of the Isle of Man's electricity is currently sourced from fossil fuels.

Can electricity be decarbonised on the Isle of Man?

Electricity generation is responsible for approximately 33% of all greenhouse gas emissions on the Isle of Man, and a majority of this is currently sourced from fossil fuels (natural gas). Without the decarbonisation of electricity, it will not be possible to reduce carbon emissions significantly in other areas such as heating and transport.

Where does the Isle of Man electricity come from?

The majority of the Isle of Man's electricity is currently sourced from fossil fuels. The interconnector is a source of carbon neutral electricity on island and also provides a route to export electricity to the GB Market.

Does the Isle of Man import energy from the UK?

The Isle of Man currently imports all of its energy from the UK (with the exception of what is produced from Sulby). In all future models, the Isle of Man remains dependent on GB for the provision of baseload. This is the case even where capacity is increased by building excess renewables, as the stabilisation is still provided by interconnectors.

Will the Isle of Man reduce emissions by 2050?

SUMMARY OF KEY FINDINGS In response to the global climate emergency, the Isle of Man Government has legislated to reduce its emissions to net zero by 2050. This target has implications for both electricity demand and generation mix.

Islands Energy Group (IEG) is the owner and operator of gas distribution networks across the Isle of Man (Isle of Man Energy), Guernsey (Guernsey Energy) and Jersey (Island Energy). In addition to this, we are actively pursuing commercial opportunities to expand our reach beyond regulation. Our responsibility includes providing heating services ...

Welcome to CleanTech, the premier provider of renewable energy solutions on the Isle of Man. Our dedicated team is committed to helping the island reduce its carbon footprint and transition to a cleaner, more

Isle of Man lean energy

sustainable future. Affordability is important to the team at Cleantech; we pride ourselves in designing and specifying the right system ...

The Chief Ministers of the Isle of Man, Guernsey and Jersey have today met with the UK Prime Minister, the Rt Hon Sir Keir Starmer KCB KC MP, to discuss the relationships between the islands and the UK. ... Plans to grow the Manx economy by harnessing the Isle of Man's natural resources to generate renewable energy have taken a significant step forwards. The Isle of Man Government has granted a survey licence to a local company to explore the possibility of developing a tidal array on an area of the seabed off the Point of Ayre.

Isle of Man: Energy intensity: how much energy does it use per unit of GDP? Click to open interactive version. Energy is a large contributor to CO₂ - the burning of fossil fuels accounts for around three-quarters of global greenhouse gas emissions. So, reducing energy consumption can inevitably help to reduce emissions.
