Should Israel build solar energy plants in the Negev desert?

The Negev Desert and the surrounding area, including the Arava Valley, are the sunniest parts of Israel, and little of this land is arable, which is why it has become the center of the Israeli solar industry. David Faiman thinks the energy needs of Israel's future could be met by building solar energy plants in the Negev.

When did solar water heaters become mandatory in Israel?

After the energy crisis in the 1970s, in 1980 the Israeli Knesset passed a law requiring the installation of solar water heaters in all new homes except high towers with insufficient roof area. As a result, Israel was in 2007 the world leader in the use of solar energy per capita (3% of the primary national energy consumption).

Are Israeli engineers involved in concentrated solar power?

However, even though Israeli engineers have been involved in both photovoltaic and concentrated solar power, the earliest Israeli companies which have become market leaders in their respective fields have all been involved in concentrated solar power.

How many solar water heaters are there in Israel?

There are over 1.3 million solar water heaters installed as a result of mandatory solar water heating regulations. Israeli engineers have been at the cutting edge of solar energy technology and its solar companies work on projects around the world.

Does Israel need solar water heating?

As of the early 1990s, all new residential buildings were required by the government to install solar water-heating systems, and Israel's National Infrastructure Ministry estimates that solar panels for water-heating satisfy 4% of the country's total energy demand.

Does solar water heating save oil in Israel?

The Ministry of National Infrastructures estimates solar water heating saves Israel 2 million barrels (320,000 m³) of oil a year. On 2 June 2008, the Israeli Public Utility Authority approved a feed-in tariff for solar plants.
