

How much solar power does Italy have in 2023?

Italy brought 1,058 MW of solar photovoltaic (PV) parks in the first quarter of 2023, reaching a cumulative installed capacity of over 26,100 MW, shows data released by the domestic solar energy association, Italia Solare.

How much solar power does Italy have?

Total installed solar power capacity in the country reached 30.3 GW at the end of 2023. Current (2023) government plans are targeting solar PV capacity to rise to 79 GW by 2030. Like most countries, solar power usage in Italy was minimal before the 21st century.

How important is solar power in Italy?

Annual and cumulative installed photovoltaic capacity (in MW) since 2000. Solar power is an important contributor to electricity generation in Italy, accounting for 11.8% of total generation in 2023, up from 0.6% in 2010 and less than 0.1% in 2000.

How many solar PV projects are there in Italy?

Italy currently has 140 GW of solar PV projects in its grid connection queue. Image: Juwi In 2023, Italy installed over 5 GW of new solar PV generation capacity, by some distance the most since 2011.

Does Italy have a roadmap for solar power development?

Yet, Italy has the potential to do more. In general, Italy lacks a clear roadmap for the development of solar capacity. Financial incentives include tax deductions for PV system purchases and investment subsidies at regional levels, with recent initiatives targeting rooftop solar PV in agriculture and low-income households.

How much does solar PV cost in Italy?

Spillati said that around 140 GW of solar PV projects are currently in the grid connection queue in Italy and that the total queue for all renewables is in excess of 300 GW. This, he said, comes down to permitting: "There is no barrier to entry" for projects to get accepted for a connection point, as he claims it currently costs only around EUR3000.
