

Variation trends in solar radiation over the years also have implications for the long term application of solar energy resources. With an increasing trend in the mean cloud amount in the past few decades (Figure 3) and a rising trend in the number of hours of reduced visibility under 8 km (Figure 4), there is an overall decreasing trend in the total global solar radiation in Hong ...

In dense urban areas like Hong Kong, where buildings significantly contribute to electricity consumption and greenhouse gas emissions, the development of cost-effective Building-Integrated Photovoltaics (BIPV) is pivotal [27]. While early research predominantly focused on roof PV potential, recent studies have begun addressing the untapped potential of ...

Utilizing the Perez model for solar irradiance, Hillshade analysis for shading effects, and Ladybug tools for facade obstruction simulation, we assess the PV potential and its spatial-temporal variations across 180,349 buildings in Hong Kong. The results show that Hong Kong's roofs and facades have a physical potential of 4.00 &#215; 10<sup>13</sup> Wh and 2 ...
