

How do I configure multiple slave inverters via a Master inverter?

Introduction This document explains how to: Configure multiple slave inverters via a master inverter Copy regional and power control parameters using the LCD panel or with an SD card To configure multiple inverters from a master inverter, the inverter communication board firmware (CPU) version must be 3.22xx or later (but not version 4.xxxx).

Should a battery be connected to a master or slave inverter?

In parallel-system scenarios, it is advisable to ensure uniform specifications and capacities for batteries on both the master and slave inverters. In cases where there is a disparity, it is recommended to connect the battery with a larger capacity to the master inverter.

What is a Master inverter?

The inverter connecting with the Ezlink module and the smart meter is the master inverter by default, and all the others are slave inverters. The master inverter issues commands to the slave inverters via the communication cables. The breakers' specifications for the BACK-UP and ON-GRID loads of one inverter type shall be the same.

How do I configure a Master inverter?

3. Use the internal buttons to configure the connection. To set the inverter designated as master, select the following in the LCD menus: The system starts automatic detection of the slave inverters connected to the master inverter. The inverter should report the correct number of slaves. If it does not, verify the connections and terminations.

How do I configure multiple slave parameters via a Master?

Configuring Multiple Slave Parameters Via a Master To configure multiple slave parameters via a master: 1. In the master inverter, enter Setup mode: Press the Enter button for at least 5 seconds. The following message is displayed:

Can a solar PV module be used with an inverter?

PV module used with inverter must have an IEC 61730 Class A rating. Operations below must be accomplished by licensed technician or Solis authorized person. Operator must put on the technicians' gloves during the whole process in case of any electrical hazards. AC BACKUP Port of S6 Series is not allowed to connect to the grid.

PV array open circuit voltage of inverter. 2) Open circuit Voltage (Voc) of PV modules should be higher than min. start voltage. 3) The PV modules used to connected to this inverter shall be ...
