Will Mauritania use gas from BP's Greater Tortue Ahmeyim development?

This advertisement has not loaded yet, but your article continues below. Mauritania will prioritize using gas from BP Plc's Greater Tortue Ahmeyim development as it looks to increase access to electricity while it adds more renewable energy.

Can Mauritania generate low-cost electricity and hydrogen through electrolysis?

Renewable Energy Opportunities for Mauritania finds that the country could deploy these resources at scale to generate low-cost renewable electricity and hydrogen through electrolysis.

Should Mauritania invest in wind energy?

A major investment in wind energy infrastructure in Mauritania could not only provide a significant source of renewable energy for the country, but also make a significant contribution to global efforts to reduce reliance on fossil fuels and combat climate change.

How can Mauritania improve energy access?

Mauritania is among several African countries that aim to use gas from new projects led by oil companies, typically focused on LNG exports, to industrialize their economies. Growing electricity generation capacity will also help to improve energy access that lags across the continent.

Can Mauritania harness wind energy?

Mauritania also possesses significant potential for harnessing wind energy. The country is blessed with strong and continuous wind most days of the year, with an average wind speed of 7 meters per second. This makes it ideal for both onshore and offshore wind farm development.

Why should you invest in Mauritania?

Investing in Mauritania can offer a wide range of opportunities, particularly in the energy sector. With major gas discoveries and large-scale renewable energy projects in development, the country is poised for significant growth in this area.

The MSGBC Oil, Gas & Power conference and exhibition - West Africa's leading event dedicated to advancing the energy sectors of Mauritania, Senegal, The Gambia, Guinea-Bissau and Guinea-Conakry - has been rescheduled to 2025.
