

What is happening in Myanmar's power sector?

Myanmar's power sector has been severely affected by the ongoing political turmoil. The power sector has been spiralling downwards since 2021 with prolonged electricity blackouts throughout the country. Electricity generation has been declining, resulting in a widening power supply-demand gap.

Does Myanmar have a power gap?

Myanmar faces a huge gap in power following the coup. In May 2021, Myanmar produced around 4000MW of electricity. In recent months, electricity production has hovered between 2500 and 2600MW. To make things worse, major investors that were developing new offshore gas fields, including French giant Total and Woodside of Australia, have pulled out.

Who manages Myanmar's energy sector?

Myanmar's energy sector is managed by the Ministry of Electric Power (MOEP) and the Ministry of Energy (MOE), which together account for over one-third of public sector revenue. Before May 2022, the two ministries operated under one single Ministry of Electricity and Energy (MOEE).

Why is the power supply-demand gap a major challenge in Myanmar?

Increasing the power supply-demand gap is the major challenge to securing reliable electricity services in the country. Myanmar already faced power shortages in 2019, of up to approximately 300 megawatts (MW). The power supply-demand gap has widened since 2021.

How can Myanmar improve its power system?

Rebuilding Myanmar's power system will require establishing trust to develop the power sector. Developing solar PV can add incremental generating capacity in a relatively fast manner.

Can Myanmar achieve universal access to electricity by 2030?

It was made possible by attracting substantial private sector financing in power generation and increased public investments in the development of transmission and distribution system. However, the prospects of achieving universal access to electricity by 2030 have dimmed in Myanmar. The growth in access rate has slowed down since 2021.
