

Are the energy Islands a new era?

“The energy islands mark the beginning of a new era for the generation of energy from offshore wind, aimed at creating a green energy supply for Danish and foreign electricity grids,” states the Danish Energy Agency.

Which countries are developing energy islands?

A number of early-stage energy island projects are being developed in European waters, led by Denmark and Belgium.

What is an energy island?

In the context of this article, we define an energy island as a hub for electricity generation from off-grid renewable sources, possibly including related production of electricity-based fuels. We want to shed more light on this highly interesting concept and our view of its development towards mid-century.

Could 'energy Islands' feed offshore wind farms with green electricity?

Developers have set plans in motion to build two “energy islands” in the Baltic and North Sea to feed offshore wind farms with large-scale green electricity, akin to the zero-emissions Irish whiskey distillery.

Are energy islands the future of renewables?

According to Sam Boorman, a consultant at FTI Consulting working on interconnectors in the North Sea, “energy islands are an exciting prospect that could allow greater roll out of renewables at lower overall cost”.

Can energy islands support the production of off-grid renewable electricity?

This feature article draws DNV's picture of how energy islands could support the production of off-grid renewable electricity and the decarbonization of hard-to-abate sectors, through supporting hydrogen and other e-fuel production.
