

Can building-integrated solar PV systems help Hong Kong achieve a low-carbon future?

These projections account for 12.68%-16.32% of Hong Kong's total electricity consumption in 2022. This study underlines the substantial role of building-integrated solar PV systems in Hong Kong's transition towards a low-carbon future, offering valuable insights for policymaking and implementation strategies.

Can PV technology expand the scope of solar energy generation in Hong Kong?

These innovative applications of PV technology present an opportunity to broaden the scope of solar energy generation in Hong Kong. As the city explores ways to diversify its energy sources, the integration of PV technology across various sectors offers a strategic pathway to augment the city's renewable energy matrix.

Can photovoltaic solar panels be installed in Hong Kong?

"Due to the high land price in Hong Kong, it is impossible to mount photovoltaic solar panels on the ground as in mainland China," says Professor Yang Hong-xing from the Department of Building Environment and Energy Engineering of PolyU, who has been conducting research on renewable energy applications for more than 30 years.

Can solar farms help Hong Kong transition to a low-carbon future?

This initiative, with the full backing of the Environment and Ecology Bureau and the Environmental Protection Department (EPD), not only provides a sustainable, low-carbon energy solution but also underscores the vast potential for similar solar farms across Hong Kong, supporting the city's transition to a low-carbon future.

Can solar power help Hong Kong grow?

In 2022, Hong Kong's total electricity consumption was approximately 44.7 TWh. The combined physical potential from rooftops and facades exceeds this figure by more than five times, highlighting the critical role solar energy could play in alleviating energy pressure and fostering sustainable growth.

Why is Hong Kong a pioneer of solar energy application?

The Pioneer of Solar Energy Application - Building Integrated Photovoltaics In Hong Kong, buildings account for over 90% of electricity usage, creating over 60% of the city's carbon emissions.

The solar farm will participate in the Feed-in Tariff (FiT) Scheme of CLP Power Hong Kong Limited. At the same time, SUNeVision, a subsidiary of SHKP and Hong Kong's largest data centre provider, will purchase CLP Renewable Energy Certificates (RECs) linked to the solar power generated by the solar farm.
