The Northern Mariana Islands, a US commonwealth situated in the Western Pacific, presents unique challenges for technology and telecommunications due to its remote geography and sparse population. Spread over 14 islands and with a total population around 49,000, the distribution of residents is highly uneven, with the majority located on the island of Saipan.

Solar energy is freely and abundantly available, virtually anywhere on earth, but especially in Africa. Solar power shields homeowners and businesses from power blackouts and future electricity price hikes. The carbon footprint of solar power generators is much lower than that of coal or gas-fired power plants (about 10 to 20 times).
