

# Philippines starting a solar energy company

Is the Philippines ready to join the Solar Power Revolution?

The Philippines has strong potential in harnessing solar energy, both for consumer use and power production, given the continued drop in prices and further innovation in the field. In addition, the country is prepared to join the solar power revolution, mainly due to its geographical location within the two Tropical Zones.

How long does it take to build a solar power plant in Philippines?

Even big solar power plants can quickly be built to provide an immediate solution to the Philippines' energy woes. According to the European Photovoltaic Industry Association (EPIA), a one-megawatt solar power plant can be installed in just six weeks, while smaller systems can only take a day to set up.

Is solar power a growing business in the Philippines?

Given these benefits, solar power generation is now a growing business in the Philippines. In 2018, Dutch consultancy firm Solarplaza ranked the country No. 1 among Asian developing countries in terms of using PV systems to generate electricity. The Philippines was also ranked fifth in the world, after Chile, South Africa, Brazil and Thailand.

How much solar power does the Philippines have?

Following the 2008 Renewable Energy Law (Republic Act No. 9513), the Philippine Department of Energy (DOE) has recently increased the national solar power annual capacity target to 500MW, under an amendment set out in March 2015. The government has awarded 61 solar contracts, aiming for a total capacity of 1.014GW.

Can the Philippines generate electricity from solar power?

According to the US-based National Renewable Energy Laboratory (NREL), the Philippines' solar radiation ranges from 128 to 203 watts per square meter. And based on NREL's analysis, the country has the potential to generate electricity from solar power at the rate of 5.1 kilowatt-hour per square meter per day.

Should solar power costs be monitored in the Philippines?

However, solar power costs need to continue to be monitored, in order to provide the Philippine electricity market an alternative and viable energy supply that can compete with the existing high energy prices.

The solar industry in the Philippines is becoming more popular in certain areas like Manila, Pampanga, and Cavite due to the monthly kWp increase of their respective electric provider.. This makes finding truly qualified solar panel companies in this field more challenging. However, this cannot stop you from taking a step towards self-consumption since all you have ...

# Philippines starting a solar energy company

With more than ten solar companies in the Philippines offering solar system installation, the Philippines' solar energy capacity has increased over the past years. From only 2 megawatts in 2012, it exponentially reached 1.37 thousand megawatts in 2021, which resulted in the Renewable Energy Act of 2008 that added the power of solar energy to ...

Solar companies can use it from start to finish. This means they can focus on great service and win over more clients. It's a big step towards success in solar energy.
