

How much energy does Portugal generate from renewables?

Portugal generated an 'historic' 95 per cent of its electricity from renewables in April, according to the network operator REN. Renewable energy generation averaged just below that for the first four months of the year, covering 91 per cent of the nation's power needs.

Why does Portugal need fossil fuels?

This is mainly due to the lack of fossil energy sources, which continues to impact the total consumption of primary energy significantly. The main fossil fuels that account for the primary energy supply are oil, natural gas, and coal. It is estimated that Portugal's fossil fuel dependence by 2030 will be around 65%.

How can Portugal meet growing energy demands in a sustainable way?

Meanwhile, the rapid expansion of hydroelectric and solar energy capacity is helping Portugal meet growing energy demands in a sustainable way. These efforts align with European Union objectives, such as the RePowerEU plan and the Renewable Energy Directive, which targets 42.5% renewable energy in total consumption by 2030.

How many GWh of electricity is produced in Portugal?

Between January 1st and May 31st of 2023, 18,751 GWh of electricity were generated from Continental Portugal, from which 73.2% came from natural resources (sources (30.5% wind, 28.30% hydro, 7.6% bioenergy and 6.8% solar). Other sources include: Natural Gas (15.9%), Fossil CHP (4.7%), and Pumped Storage (6.2%).

Why is Portugal moving to a cleaner energy source?

This milestone also aligns with the country's broader energy transition goals, which began decades ago and saw a major turning point in 2021, when Portugal became one of the first European nations to cease coal-powered electricity production. This shift towards cleaner energy sources has not only benefitted the environment but also the economy.

Why is Portugal so dependent on imported energy?

Portugal ranks as the 11th EU member state most dependent on imported energy sources, with a decreasing dependence since 2000, when 85% of its energy was imported. This is mainly due to the lack of fossil energy sources, which continues to impact the total consumption of primary energy significantly.

STOCKHOLM, March 26, 2020 /PRNewswire/ -- Swedish battery technology development company TEXEL Energy Storage AB (TEXEL) receives support from Swedish government agency Vinnova to develop and ...

The Slow Mill is a wave energy converter consisting of a floater with blades variably connected to an anchor on the seabed. Waves push the floater up and the blades away from the anchor. This way not only the up and down movement but also the back and forth movement of the waves is utilized, according to Slow Mill

Sustainable Projects.

TEXEL Energy Storage AB ("TEXEL") announced a rebranding to TEXEL Energy, a name change that better reflects the multifaceted business opportunities that have emerged through years of research and development (R& D), acquisitions, and partnerships.

Det menar TEXEL Energy Storage, som arbetar med en termokemisk energilagringsteknologi som lagrar och producerar b&#229;de el och v&#228;rme. - N&#228;r vi talar om energi och energibehov &#228;r det l&#228;tt att b&#246;rja prata om enbart el och elektrifiering. Men, man f&#229;r inte gl&#246;mma att energiomst&#228;llningen kr&#228;ver minst lika mycket v&#228;rmeenergi som elektricitet.

Portugal ranks 7th in countries with the highest share of renewable sources used to produce energy in Europe. As of May 2023, renewable energy incorporation in mainland Portugal was 60.3%, 30.3% in Madeira, and 35.1% in the Azorean islands. Portugal continues to be a global leader in renewable energy production.

In 2013, 25.7% of the energy in Portugal was renewable, increasing to 27% in 2014 and 28% in 2016. By 2020, this number increased to around 30%. Portugal made worldwide news when in February 2016, 95% of the electricity produced in Portugal was sourced from renewable energy, including biomass, hydropower, wind power, and solar power. ...

It enhances TEXEL's capabilities in converting waste heat and stored thermal energy into electricity, reinforcing our position as the global leader in this space. The technologies acquired will be pivotal in our push to develop ...

TEXEL is developing cost effective, sustainable and circular hybrid energy storage / batteries and energy production solutions. In combination with renewable energy the TEXEL technology is not only cost competitive to fossil fuels, but as well competitive in terms of energy distribution, 24 hours a day, 7 days a week, 365 days per year.

En enorm svensk batterifabrik l&#228;ggs ner innan den ens har &#246;ppnat. Texel Energy tvingas avbl&#229;sa sin j&#228;ttesatsning som skulle ha gett 6000 jobb. - Vi har hela tiden sagt att vi beh&#246;ver n&#229;gon form av statligt investeringsst&#246;d f&#246;r att kunna genomf&#246;ra ett s&#229; pass stort fabriksprojekt, s&#228;ger Lars Jacobsson, Texel Energys vd, till Sydsvenskan.
