Will the EU end Russian energy imports by 2030?

On 8 March, the European Union announced a plan to end all Russian energy imports by 2030. This could cause energy costs to soar, but the EU said it will protect businesses and consumers in the bloc by using price regulation, state aid and taxation. "We must become independent from Russian oil, coal and gas."

What is Russia's energy strategy?

New techniques and technologies will be needed to decarbonise these areas. The energy strategy of Russia aims to maximize the use of domestic energy sources and realise the potential of the energy sector to sustain economic growth. The Strategy also aims to reduce the country's energy intensity by 56% in 2030.

Should Russian energy transition be 'gradual' and 'balanced'?

The rhetoric of the Russian establishment occasionally acknowledges the necessity of energy transition, albeit with the condition that it should be "gradual" and "balanced," as Putin said at the BRICS summit in Johannesburg in August.

Where are Russia's wind power stations located?

The joint company is acquiring wind power stations in Ulyanovsk region on the Volga and Rostov region in southern Russia- built with due consideration of all official Russian requirements of producing locally and concluding long-term agreements on power supply.

Can Europe wean itself off Russian gas?

The International Energy Agency (IEA) has produced a 10-point plan outlining how Europe could wean itself off Russian gas. This involves a mixture of maximizing gas storage, sourcing gas from other sources and increasing the amount of power generated from renewable and low-emission sources.

Why is the green transition gaining momentum in Russia?

Lanshina agreed that the green transition was gaining momentum in Russia mostly to please its European partners. The real value of some projects, such as achieving carbon neutrality in the Sakhalin region by 2025, remains controversial because the country's climate undertakings are mostly an imitation of a real climate policy.
