

Where can I dispose of lithium batteries?

All lithium batteries must have both terminals covered by non-conductive electrical tape to avoid short-circuit in the collection box. Sand for waste disposal can be found at the battery collection area and in the Chem Van. On the LMG, the alkaline battery collection point is in the Electronics Lab. This container is for alkaline batteries only.

What is a lithium battery?

"Lithium batteries" refers to a family of different lithium-metal chemistries, comprised of many types of cathodes and electrolytes, but all with metallic lithium as the anode.

Should lithium batteries be stored in a fire extinguisher?

Any primary lithium battery storage should have immediate access to both a Class D and Class ABC fire extinguisher. Never stack heavy objects on top of boxes containing lithium batteries to preclude crushing or puncturing the cell case. Severe damage can lead to internal short circuits resulting in a cell venting or explosion.

Are batteries safe for shipping?

All batteries must be made safe for handling prior to packing for shipment. For the USAP, it is important to follow International Maritime Dangerous Goods (IMDG) code, and/or International Air Transport Association (IATA) code.

What are the UN Regulations on lithium ion batteries?

UN Regulations: UN UN3480 Lithium Ion Batteries, UN3481 Lithium Ion Batteries contained in equipment, UN3090 Lithium Metal Batteries, and UN3091 Lithium Metal Batteries contained in equipment UNOLS RVSS, Chapter 9.4 (8th Ed.), March 2003 Woods Hole Oceanographic Institution, safety document SG-10 This document generates no records.

What happens if a lithium ion battery is partially discharged?

Since lithium-ion chemistry does not have a "memory," there is no harm to the battery pack with a partial discharge. Avoid using or storing rechargeable lithium cells at elevated temperatures as heat degrades these batteries. One crucial hazard associated with both primary and secondary lithium batteries is short circuiting.
