What is a solar farm leasing process?

The solar farm leasing process is a complex and collaborative endeavor that necessitates the involvement of various stakeholders, including landowners, solar developers, investors, utility companies, and local governments.

Should you Lease Your Land for a solar farm?

If you're a farmer or landowner looking to lease your land for a solar farm, you may have a ton of questions about the process. This is completely normal, as most people don't have enough experience with the solar industry to make an informed decision to lease their land for a solar project.

How long does a solar farm lease last?

The lease requires the landowner to dedicate a portion of their land to solar for a set period, typically 20-25 years. During the operational period of the solar farm, the use of that portion of the land is limited and may require permission from the solar company.

What does it mean to lease your land for solar?

Leasing your land for solar means allowing a solar company or developer, like OYA Renewables, to design, permit, construct, and operate a solar energy system on your property in exchange for payment or compensation, typically for a set period (e.g. 25 years).

What is the difference between leasing land to a solar project developer?

There is a key difference between leasing land to a solar project developer versus a broker or land agent. Solar project developers have a vested interest in getting the project completed and because of that, want to build a long-term relationship with you.

In other words, assuming you have 250 acres of land that is worth 10k per acre - the solar company may say that you have 150 acres of useable land - and offer to lease all 250 acres at a 150 acre rate (they may offer 12% of land value per year - so \$180k/year). ...
