What is solar energy?

Solar energy is energy sourced from the sun. The sun radiates incredible amounts of energy and, in a single hour, produces enough to meet the world's electricity needs for a whole year. Thanks to advances in technology, we can capture this abundant source of energy and use it to power our homes, businesses, vehicles and more.

How can solar energy help a home?

By utilising solar energy to power the heating system, homeowners can significantly reduce their carbon footprint and contribute to a greener future. Solar power is a clean and renewable energy source that produces zero emissions during operation.

What is active solar heating?

Active solar heating is a way to apply the technology of solar thermal power plants to your home. Solar thermal collectors, which look similar to solar PV panels, sit on your roof and transfer gathered heat to your house through either a heat exchanger or via piping that runs hot water through your house.

Where can solar panels be used to generate electricity?

Solar panels can be used to generate electricity in any location that has access to sunlight, making it a very flexible and accessible method of energy generation. This is particularly useful for caravan or motorhome owners or those living in extremely remote areas for example.

What is a solar panel used in a home?

used in a home. Here are some quick definitions to help you. Solar photovoltaic (PV) systems are made up of several panels. Each panel has many cells made from layers of semi-conducting material, usually silicon. When light shines on material, it creates a flow of electricity. Solar panels don't need direct sunlight and can work on cloudy days.

What is solar energy used for?

That heat can then be used for three primary purposes: to be converted into electricity, to heat water for use in your home or business, or to heat spaces within your house. Each of these options requires distinct technologies, but all of them harness the power of the sun to offset some portion of your energy needs.
