What is a small Solar power generator?

A small solar power generator is a relatively cheap, sustainable way to generate off-the-grid power when you need it. For example, if you have a cabin that you can't connect to a power grid and you don't want to rely on a traditional gasoline-powered generator, you might consider installing a small photovoltaic solar power system.

What is a solar generator?

Solar generators are portable battery storage systems powered by solar panels. Unlike solar-plus-storage systems, solar generators are not designed to back up major appliances in the event of an outage. You can compare solar generators by assessing the watts and watt-hours of the systems, as well as their battery chemistries.

Are solar panels a generator?

Solar panels can't act as generators on their own - the electricity they generate needs to be stored somewhere. So, solar generators typically consist of two main products: solar panels and a battery storage system. When you place your solar panels out in the sun, they generate direct current (DC) electricity.

How much electricity does a small Solar power generator use?

For example, if you use 300 watts of energy a day, 300 multiplied by 24 hours gives you 7,200 watt-hours (Wh). That's how much electricity you need your small solar power generator to be able to provide on an average day. For this example, 7,200 Wh can also be looked at as 7.2 kilowatt-hours (kWh).
