"Residents of remote and island communities face energy disruptions, natural disasters, and climate change impacts and pay some of the nation's highest energy costs," said Secretary of Energy Jennifer M. Granholm. "These 11 communities--working hand-in-hand with DOE's network of experts--will implement resilient and secure clean energy solutions."

Why do small islands need a new energy infrastructure?

Islands - including those that make up the group known as Small Island Developing States (SIDS) - also need to upgrade their energy infrastructure so that it is resilient to higher temperatures, more frequent natural disasters and flooding related to rising sea levels.

Could distributed energy resources boost the deployment of renewables on islands?

Distributed energy resources - or small-scale energy resources that are usually situated near sites of electricity use, such as rooftop solar - could play an important role in boosting the deployment of renewables on islands, increasing the security, resilience and affordability of power systems while accelerating decarbonisation.

Could islands cut ties with the fossil fuel industry?

Many islands have access to abundant wind, solar, hydro, tidal, biofuel, or geothermal energy resources and could significantly cut ties with the fossil fuel industry.

New York, NY, Nov-25, 2019 / (Aerospace NEWS) -- The military power solutions market is projected to grow from USD 5.35 Billion in 2016 to USD 9.01 Billion by 2022, at a CAGR of 9.07% during the forecast period.
