Starlink draws around 100-180W (depending on version and if it's trying to shed snow), so you'll need 800 to 1440 Wh to run Starlink for 8 hours, plus enough extra capacity to overcome inefficiencies in the inverter setup.

The EcoFlow stuff is a very expensive way to run a lithium battery bank and a pure sine wave inverter. I know my Starlink with Cisco switch (2960-x) ran for about 30 mins on an APC 900va ups the other day. maybe like 120-150W max consumption.

The battery power station/solar generators will sit there silently and not consuming and meaningful energy when not in use. The ultimate is actually to pair it with solar panels, or even a gas generator. When camping I leave the power bank on all day and run the generator for an hour every other day or something to recharge the power bank.
