

# The man who has made his own wind power for 30 years

Did James Blyth create the world's first wind turbine?

When James Blyth created what many believe was the world's first wind turbine in 1887, villagers dismissed it as the "work of the devil". The huge structure at Blyth's family home in the Aberdeenshire village of Marykirk was built with four cloth sails and generated enough power to light 10 bulbs along with a small lathe.

Who invented the wind generator?

Today's GREATforImagination invention is the first ever wind-powered electrical generator, created by the Scottish engineer and physicist James Blyth (1839-1906). Blyth was the son of an innkeeper, but took advantage of a scholarship to gain a good education and an academic career. In 1887, while a professor at Anderson's College...

Who invented the wind turbine?

Blyth was ahead of his time, but remains largely overlooked, even though he beat the American engineer Charles Brush and the Danish inventor Poul la Cour, who have been credited with inventing the wind turbine. But none of the pioneering wind turbines could compete with cheap and abundant coal, and then oil.

Who was the first person to spin electricity from air?

Hurricane, Bahamas, by Winslow Homer, 1898. The Metropolitan Museum of Art. Public Domain. In 1887 James Blyth became the first person to spin electricity from air, lighting his home in Marykirk, south of Aberdeen, with a 33ft cloth-sailed wind turbine.

When did James Blyth start experimenting with windmills?

After experimenting with windmills James Blyth made his breakthrough in July 1887 when his cloth-sailed wind turbine in the garden of Blyth House in Marykirk was used to charge accumulators. The turbine produced enough power to light ten 25-volt bulbs in a "moderate breeze" and could be used to power a small lathe.

Who invented the windmill?

In July 1887 he built a windmill attached to a dynamo to light his holiday cottage in the village of Marykirk in Scotland, and even stored the power in a battery invented by the French engineer Camille Alphonse Faure. "When a good breeze was blowing, I stored as much in half a day as gave me light for four evenings," Blyth wrote.

James Blyth built two wind turbines before he assembled his 1891 Vertical-Axis-Wind-Turbine at his summer home in Marykirk, Scotland. ... made his mark. ... Y alta Soviet Union 1931 30 707 100 7.1 ...

# The man who has made his own wind power for 30 years

When James Blyth created what many believe was the world's first wind turbine in 1887, villagers dismissed it as the &quot;work of the devil&quot;. The huge structure at Blyth's family home in the ...

He saw wind power as a solution to the oil and gas shortages of the 1950s - a view that was decades ahead of its time - and produced the first engineering textbook on wind power. ...

I n 1887 James Blyth became the first person to spin electricity from air, lighting his home in Marykirk, south of Aberdeen, with a 33ft cloth-sailed wind turbine. Blyth was born in Marykirk and had a cottage there, but by the ...

There are few in the world of wind power better placed to discuss its transformational impact on the global energy mix than Andrew Garrad. Joint winner of the 2024 edition of the Queen Elizabeth Prize for Engineering ...

Four years later, in 1891, Blyth patented his &quot;wind engine&quot; and went on to create a larger version which supplied power to Montrose Lunatic Asylum - later the Sunnyside Royal Hospital - for almost ...

The government says it wants to generate enough wind energy to be able to power every home in the UK by 2030. Its energy strategy promises a major expansion of offshore wind turbines in the coming ...

OverviewEarly lifeCareerLater life and deathLegacyHonoursPublicationsSee alsoJames Blyth (4 April 1839 - 15 May 1906) was a Scottish electrical engineer and academic at Anderson's College, now the University of Strathclyde, in Glasgow. He was a pioneer in the field of electricity generation through wind power and his wind turbine, which was used to light his holiday home in Marykirk, was the world's first-known structure by which electricity was generated from wind power. Blyth patented his design and later developed an improved model which served as ...

One of the highlights of his trip must surely have been when he got to visit a huge wind farm in Palm Springs, California, and to discuss his invention with fellow "wind man" Chris Copeland of Wintec energy. Apart from ...
